

TANUSHREE B N

SOFTWARE DEVELOPER

SUMMARY

Aspiring Software Developer eager to leverage full-stack skills to design scalable applications that deliver high performance and seamless user experiences.

EDUCATION

SDM Institute of Technology, uijire

B.E Artificial Intelligence and data science

2022-2026 | CGPA: 7.45

Sri Adichunchanagiri PU College

PCMB

2022 | PERCENTAGE: 74.16

Sri Adichunchanagiri Vidya vardhaka High School

SSLC

2020 | PERCENTAGE: 66.56

INTERNSHIP EXPERIENCE

Software Developer Intern

Mitra Softwares, Shivamogga, Karnataka

- Contributed to the development of real-world client projects using modern full-stack technologies.

- Built and deployed multiple production-level web applications as part of the development team.

- Successfully delivered key client projects: Nagashree School, Channarayapatna, Hassan (nagashreeschoolcrp.in) and St. Joseph Public School, Narasimrajapura, Chikkamagaluru (ka476cisce.org).

AREAS OF INTEREST

Full stack development

Machine learning

Deep learning

TECH STACK

Programming language : Python, JavaScript.

Frontend Development: React 18, Vite, Tailwind CSS, HTML, CSS.

Backend and APIs: Node.js, Express.js, REST API, FastAPI.

Database: PostgreSQL, MangoDB.

Tools and Platform: Git, GitHub, cPanel, Vercel, Power BI, Excel.

Other: Prompt Engineering, UI/UX.

CERTIFICATIONS

Infosys: Python programming, scala programming, Developing with MongoDB, Introduction to Deep Learning, introduction to Artificial Intelligence

PROJECTS

-FactCheck – Deepfake Video Detection System Using Resnet-50

FactCheck is a deepfake video detection system designed to identify manipulated videos on digital media platforms. The system uses a hybrid approach combining deep learning and machine learning techniques. Video frames are extracted using OpenCV and preprocessed through resizing, normalization, and RGB conversion. A pre-trained ResNet-50 model is used to extract deep visual features, which are further enhanced with handcrafted texture and frequency features such as LBP, edge, and FFT-based descriptors. These features are combined into a single feature vector and classified using Random Forest and XGBoost algorithms. The system outputs a confidence score and classifies videos as real or fake. FactCheck is deployed as a web application using Flask and PostgreSQL, providing secure login, video upload, result visualization, and history tracking.

-Data Visualization by using PowerBI

This project focuses on embedding Power BI reports into a web-based application to provide interactive college data

visualizations. It helps students, parents, and consultants easily explore information such as college ratings, fees, and facilities. Using HTML, CSS, JavaScript, and the Power BI JavaScript API, the system delivers a responsive and user-friendly interface. Dynamic filtering allows users to customize views based on preferences, enabling better data-driven decisions. The project follows an Agile development approach, ensuring flexibility and continuous improvement. It emphasizes usability, real-time interactivity, and cross-platform compatibility while avoiding backend data management beyond Power BI integration.

Decentralized To-do List

I developed a Decentralized To-Do List Application using Solidity on the Ethereum blockchain to demonstrate how blockchain can replace centralized task management systems. The application uses a smart contract where tasks are stored on-chain, ensuring transparency, immutability, and user ownership. Each task includes a unique ID, content, and completion status, and tasks are mapped to individual wallet addresses for privacy. Users can add, view, and complete only their own tasks using msg.sender. The contract was developed, compiled, deployed, and tested using Remix IDE. This project enhanced my understanding of smart contracts, Ethereum architecture, and decentralized application fundamentals.

Nagashree Connect - School Website with Admin Dashboard (Feb 2025)

React 18, TypeScript, Tailwind CSS, PHP | GitHub: <https://github.com/Tanushree-BN/nagashree-connect/>

Live: <https://nagashreeschoolcrp.in>

- School website with pages for Admissions, Gallery, Faculties, and Facilities.
- Secure admin panel for managing content, applications, and gallery.
- Form validation with React Hook Form and Zod. Deployed on cPanel with PHP backend.

St. Joseph Public School - School Web Platform (Mar 2026)

React 18, TypeScript, Tailwind CSS, Vite | GitHub: <https://github.com/Tanushree-BN/st.-joseph-s-bloom/>

Live: <https://ka476cisce.org/>

- Multi-page school website with Academics, News and Events, Gallery, and Admin Dashboard.
- Smooth animations using Framer Motion. Optimized for cPanel deployment.
